

ManorIVF Donor Egg Service to Canada

We Bring the Benefits of Overseas Egg Donation to Canada

ManorIVF is proud to be able to provide donor eggs to patients in Canada with no wait. Dedicated to putting patients first and mindful of the reasons why patients seek egg donation treatment overseas, ManorIVF allows patients to undergo treatment in Canada where they can access the high quality of care they know and trust. Additionally our egg donors receive the same individualised attention and comprehensive clinical management that you would expect within Canada.

ManorIVF is an international assisted reproduction provider specialising in the provision of donor oocytes and sperm worldwide. ManorIVF was founded and is under the medical direction of Dr Shlomi Barak, an ex-Melbourne, Australia fertility specialist and andrologist. We assume full responsibility for all of our medical procedures, have a strong quality management system, and work at the highest clinical and scientific standards.

The ManorIVF team recruits and screens egg donors from Europe complying fully with HFEA, NHMRC and Assisted Human Reproduction Canada regulations. Our multidisciplinary donor screening team includes physicians, psychologists/counsellors, and genetic counsellors. Our rigorous screening process includes full review of medical history, physical examination, genetic and psychological screening, and testing for infectious diseases.

All of ManorIVF's donor gametes are shipped using purpose built dry-shippers and are always accompanied by on-board hand couriers. All samples undergo a pre-clearing process and are exempted from x-ray scans. ManorIVF gamete shipping meets IATA (International Air Transport Association) requirements.

Based on statistics to date, treatment undertaken with ManorIVF donor eggs provides a cumulative pregnancy rate (8 weeks) of above 70% based on 10 oocyte batch with above 96% warming survival rate.

ManorIVF provides service in Canada, Australia, UK, Cyprus, Israel, Ukraine and Austria.

Donor welfare is ManorIVF's priority and we take all possible steps to ensure that each donor receives the same individual care and attention that you would expect for an Canadian patient. As the first provider in Europe to implement mandatory donor counselling, ManorIVF is leading the way in ensuring that donors are fully informed and understand the process involved with providing this generous gift. We are very transparent in our methods because we want you to feel confident about our services. ManorIVF ensures that both the physical and mental wellbeing of our donors are being looked after at all times.

ManorIVF does not pay donors for their eggs. Egg donation is considered altruistic in nature and we follow all requirements and guidelines regarding altruistic donation that have been set by commonwealth legislation.

ManorIVF takes very seriously its compliance with managing family limit registers. Our service operates in strict adherence to family limits set by regulation and legislation in each jurisdiction of operation.

Donor Screening and Eligibility

At ManorIVF all donors undergo a rigorous screening and selection process, and must meet defined criteria to be eligible for donation. These include:

- > Oocyte donors should be between the ages of 21 and 31
- > Proven fertility - Most of the ManorIVF donors are fertility proven (over 90%)
- > Donors should be healthy and not be a carrier of hereditary diseases
- > A complete personal and sexual history will be obtained to eliminate individuals who might be at high risk for HIV, STDs, or other infections that might be transmissible via gamete donation
- > All donors undergo significant routine testing and blood screening as part of their eligibility criteria
- > All donors undergo a detailed physical examination, a pelvic exam, pelvic scan including ovaries assessment, and antral follicle count
- > All donors undergo appropriate genetic evaluation based on medical history, in accordance with ethnic background and current guidelines
- > Psychological evaluation and counselling by a qualified mental health professional is mandatory

Donor Interview Questions

All of ManorIVF donors undergo in-depth interviews to gain full understanding of the following:

- > Extended family medical history (parents, siblings, grandparents, great-grandparents, uncles, aunts, first cousins)
- > Own medical history (including allergies, medications)
- > Alcohol consumption, use of illegal substances and smoking (donor and family members)
- > Gynaecological history (including previous donations and pregnancies)
- > Children's health and development
- > Psychological profile and practical issues linked with donation
- > Education, grades, achievements, profession, special talents and interests
- > Phenotype of donor, her parents and siblings (eye colour, hair colour and texture, skin colour, height, weight)
- > Donor's family origins and genealogy, race, body type, religion, vocational dispositions
